Thesis Summary

Worked with Google Glass in rehearsal and performance contexts. Programming applications were focused on John Corigliano’s *Gazebo Dances* for Band; the work was conducted in concert on November 22nd, 2013. Applications (“Glassware”) developed (or ported) included a metronome, an application for the audience to view the conductor’s perspective of the ensemble, and a miniature score viewer, allowing the conductor constant eye-contact with the ensemble while viewing the score peripherally. The final thesis included background information of the work, rehearsal and performance considerations, an errata list, and other texts about *Gazebo Dances*. It also discussed programming considerations for Google Glass, and ideas about extending its use in other aspects of conducting and music.
